

Digital Medical Assistant

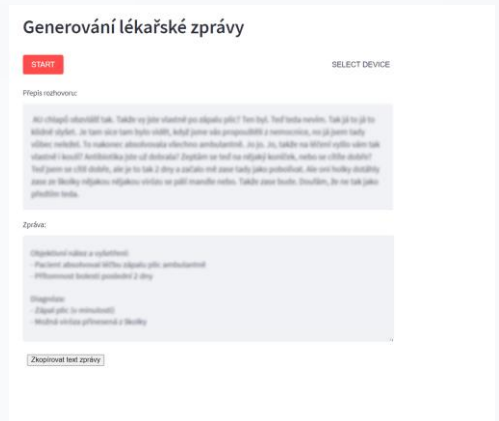

Digitizing Healthcare: Enhancing Patient Care and Efficiency

Automate administrative tasks in your practice or hospital and **save doctors significant time**. Our Digital Medical Assistant **minimizes the administrative burden**, allowing doctors to **prioritize patient care while effectively addressing the doctor shortage**.

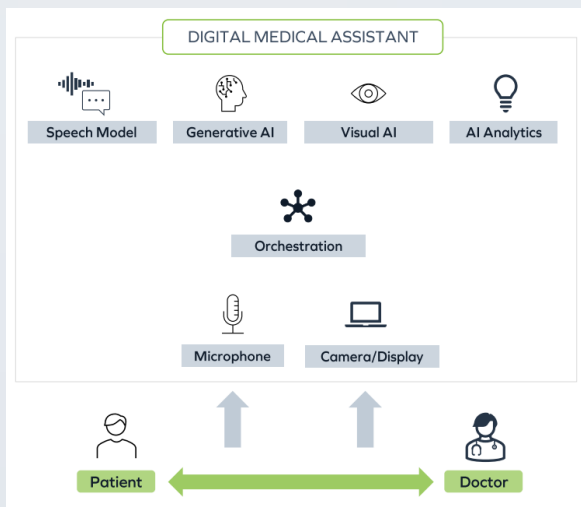

How it works?

Throughout the patient examination, the Digital Medical Assistant actively **monitors conversations and automatically transcribes the dialogue**, ensuring precise and comprehensive documentation. At the conclusion of the examination, the assistant seamlessly **generates a medical report**, which the doctor can only conveniently copy.

- Generation of medical summary, prescriptions
- Data-driven healthcare based on collected data
- Identification of unusual patterns (similar symptoms, incipient epidemic, ...)

Forecast epidemics thanks to data analytics

By digitizing healthcare processes, our solution enables healthcare providers to **access comprehensive statistical data in real-time**. This facilitates the **identification of emerging epidemics, patterns of symptoms, and other critical insights** for proactive healthcare management. Additionally, the system empowers healthcare organizations to continuously evaluate and improve overall healthcare efficiency.
